OBJECTIVE:

Detail-oriented **SOC Analyst** with **3.7 years** of hands-on experience in **threat detection, incident response, and vulnerability assessment**. Passionate about leveraging tools like **QRadar, CloudSEK, and XSOAR** to strengthen security postures and mitigate risks in fast-paced environments. Seeking to contribute analytical skills and foundational cybersecurity expertise to a proactive SOC team.

PROFESSIONAL SUMMARY:

Dynamic and detail-oriented **Cybersecurity Consultant** with **3.7 years of hands-on experience** in **Risk Advisory and Cyber Operations** at *Santrotech Software Technologies Pvt Ltd*. Experienced in **real-time threat monitoring, incident response, and vulnerability assessment** using tools like **QRadar, Cloudsek, XSOAR, and MS Defender**.

Skilled in analyzing suspicious activities across multiple environments, managing phishing investigations, and executing mitigation strategies in alignment with **MITRE ATT&CK** framework. Adept at performing server health checks, escalating incidents, and collaborating with global security teams.

Known for being an **empathetic communicator**, a **quick learner**, and a team player with a passion for cybersecurity. Brings a creative and analytical mindset to help organizations **detect, respond to, and recover from cyber threats**.

Key Skills

- SIEM (QRadar, Splunk Phantom), Threat Intel (Cloudsek, Threat Grid)
- TCP/IP, Malware Analysis, Email Security, Incident Response
- Vulnerability Management (Nessus, Qualys), Threat Hunting
- MITRE ATT&CK, IOC Analysis, Recon & Playbook Automation

EXPERIENCE:

Santrotech Software Technologies Pvt Ltd

Role: SOC Analyst

Duration: Sep 2021 – Present

RESPONSIBILITIES:

- In Threat Intel, we used to track cyber activities that threaten information systems, such as computer hacking or malware attacks. We analyze data about attackers, their capabilities, and motives to help organization to prevent those cyber-attacks.
- In the Cloudsek, the major responsibilities that we are Performing Deep & Dark Web Monitoring, Brand Risk Monitoring Data Leak Monitoring & Infrastructure Threats
- In the SIEM, we are Analyzing potential infrastructure security incidents to determine if incident qualifies as a legitimate security breach.
- Handling the phishing mails through MS defender.
- Analyzing URL Inbound & Outbound related alerts from XSOAR and Recon related from Deception.
- After analysis will rise a ticket to particular team which includes all information about the offense.
- Conclusion & closing of each incident with the help of MITRE mapping tactics.
- Creating & fine-tuning the rules according to the Security configurations as per client requirement.
- Produce security incident reports and briefings to be distributed to the team lead and manager.
- Analyze various reports from security devices such as firewall, IPS/IDS, Proxy etc.
- Performing Weekly, Monthly and NCIIPC reports as per the client requirement, also used prepare a complete incident report when a suspicious or malicious attack happens in a network.

TOOLS USED:

SIEM: QRadar

Log & event analysis, incident investigation, and reporting.

Integrating new devices with QRadar for real-time log collection.

Troubleshooting log source devices for log collection issues.

Basic correlation rule implementation and case studies.

Report, dashboard creation, and rule fine-tuning.

Assessing incidents, analyzing impact, risk assessment, and mitigation guidance

Cloudsek:

Deep & Dark Web, Brand Risk, Data Leak & Infra Threat Monitoring.

Alert escalation, rule creation, report downloads.

Purchase tracking, takedown initiation/tracking, asset config & tracking.

CloudSEK support, IOC sharing, audit reviews, weekly & daily alert reports.

Vulnerability Assessment: Security Center / Nessus:

Quarterly scanning of Servers and Preparing remediation report.
Validating mitigated VA points using NMAP and Kali Linux.

Threat Intel:

Analyzing advisories from NCIPC & CERT-In using CVSS.
Tracking cyber activities like hacking, malware, etc.
Maintaining daily IOC/vulnerability trackers, weekly client sharing.
Coordination with security teams for risk mitigation.
SIEM: Splunk Phantom:
Log/event analysis, incident handling within SLA.
Raw log analysis from critical systems for anomalies.

EDR:

Monitoring security safeguards & system performance.
Vulnerability assessments and endpoint threat analysis.
Reporting incidents to SOC responders.

Anti-DDOS: Radware DefensePro:

Monitoring, threat analysis, IP blacklisting/whitelisting.
Weekly/Monthly report analysis.

MS Defender: • Phishing email analysis based on client/user reports.

Cortex XSOAR:

URL & playbook incident analysis.
Monitoring integrated QRadar dashboard data.
Playbook rerun for process completion on errors.
URL & playbook incident analysis.

Zscaler Deception:

Recon incident analysis, attacker TTP (Tactics, Techniques, Procedures) understanding.

NAC: Access to detailed user/system info including servers, routers, switches, printers, etc..

CP4s: Deep investigation of threats, IOCs, DDoS, and vulnerabilities.

COURSES:

- Qradar SIEM Foundation
- EHE
- CORP Security Risk Framework
- OWASP top 10
- Cybersecurity Essentials (LFC108)

Certifications:

- Microsoft Excel
- CEH,
- CCNA
- Comptia CYSA+.

ACADEMIC CREDENTIALS:

Completed Btech from Swami Vivekananda Institute Of Technology (JNTUH University) in -2023

PERSONAL INFORMATION:

Date of Birth: 18/04/2000

Present Resident Address: Guggilla(V), Bejjanki(M), Siddipet Dist-505528

Languages known: English, Telugu & Hindi.

I hereby declare that all the information stated above is true to the best of my knowledge.

Date: March 2025
